

KATIM® Messenger

Defence-grade secure messaging for chat, voice and video.

ESSENTIAL SECURITY FEATURES

- UAE-developed and hosted with optional on-premise, behind-the-firewall control. Data is kept strictly within UAE borders, and subject to UAE laws
- Multi-layer end-to-end encryption with optional UAE National Cryptography
- Strong Private Key Infrastructure (PKI) based user identity with customer-controlled hardware security module (HSM) based certificates
- User-group and communication segregation and control
- InfoSec-focused operational security through compliance and auditing
- Designed ground-up with comprehensive threat modelling protecting against sophisticated application, identity and man-in-the-middle (MITM) attacks
- Thoroughly and independently multi-tier-security tested and validated by leading-edge, independent testing and validation facilities for holistic security and quality assurance
- Secure Federation allows your organisation to trust another by federating both organisations, allowing secure communications between both organisations
- Secure Circles further isolate users by creating secure circles of peers

CAPABILITIES

- Works with KATIM® Phones, Android and iOS mobile devices
- One-to-one, group, cross-platform chat
- Recall, delete, self-destruct messages
- One-to-one and group chat, voice or video calls
- Switch between calls and chats
- State-of-the-art Opus WB audio codec
- Higher quality & lower bit-rate than industry standard
